### DETAILED ACTION

1. Claims 16-19 are allowed and renumbered as 1-4, respectively.
2. The following is an examiner's statement of reasons for allowance:

The limitation --“wherein the exposed contact regions of the conductive bumps have a rounded profile”-- distinguishes over the prior art because in the prior art the processes of pressing the PCB and IC together and then reflowing the solder ball causes the previously exposed portion of the bump (the portion opposite the PCB) to become flattened against the IC. Therefore, inclusion of the “rounded profile” limitation renders moot whether the post-reflow structure of the prior would also inherently be metallurgically bonded. Note that although the exposed contact regions of the bumps (5) in figure 3 of Matsubara reference is shown in rounded profile, these bumps are not --“metallurgically bonded to said integrated circuit chip”-- (as applicant claimed in claim 16) until the processes of pressing the PCB and IC together (as shown in Matsubara’s figures 4 or 5) and then reflowing the solder ball causes the previously exposed portion of the bump (the portion opposite the PCB) to become flattened against the IC.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
